- **53.** Final Rule

1. Competition Overview

APPLIES TO — GROUP A & GROUP B

The CYBORG Python Coding Challenge 2026 is a practical Python programming competition designed to provide students with an opportunity to develop a functional software project using Python.

The competition focuses on practical programming, logical thinking, problem-solving, application development, UI/UX, functionality, creativity and project presentation.

Participants will be divided into two groups based on age.

Group	Age	Challenge
Group A – Rookie Coders	11–15 Years	Python To-Do Challenge
Group B – Seasoned Coders	16–22 Years	Smart Team Management Application Challenge

The competition is conducted 100% online from registration through project submission and evaluation.

2. Objectives of the Competition

APPLIES TO — GROUP A & GROUP B

The competition aims to help participants:

1. Apply Python programming concepts in a practical project.
2. Develop logical and computational thinking.
3. Improve problem-solving skills.
4. Build a functional Python application.
5. Understand basic software development practices.
6. Design a user-friendly application interface.
7. Demonstrate creativity and innovation.

8. Develop project presentation skills.
9. Build a project suitable for their learning portfolio.
10. Gain recognition for their programming skills.

The competition follows the learning cycle:

UNDERSTAND → PLAN → CODE → DESIGN → BUILD → TEST → EXPLAIN → SUBMIT

3. Competition Mode

APPLIES TO — GROUP A & GROUP B

100% Online

The CYBORG Python Coding Challenge 2026 is completely online.

All participant registration, project development, submission and evaluation activities will be conducted through online processes.

The competition does NOT include:

- X Offline project submission
- X Physical project submission
- X Offline judging
- X In-person judging
- X Live/in-person project demonstration
- X In-person interview
- X Live technical interview
- X Physical modification task
- X Offline verification

Participants will be evaluated only through the materials submitted through the official online submission process.

✂ **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) —**
<https://www.cyborgrobotics.in/codefest>

4. Official Evaluation Material

APPLIES TO — GROUP A & GROUP B

The evaluation team will evaluate the participant using the submitted competition material, including:

- 1.Submitted project/source code
- 2.Required supporting project files
- 3.1–2 minute explanation/demo video
- 4.Required social-media post/link, where applicable
- 5.Official online judging rubric
- 6.Other information specifically requested in the official submission form

Participants must ensure that all submitted material is complete, accessible and clearly presented.

5. Eligibility

APPLIES TO — GROUP A & GROUP B

The competition is open to participants between 11 and 22 years of age, subject to the group requirements.

Group A

Age: 11–15 years

Group B

Age: 16–22 years

Participants must provide accurate information during registration.

Any false or misleading information may result in disqualification.

6. Registration Fee

APPLIES TO — GROUP A & GROUP B

The registration fee is:

₹499 PER PARTICIPANT

The participant must complete the official registration and payment process.

Registration does not guarantee:

- Winning a prize
- Selection as a finalist
- Internship
- Letter of Recommendation
- Any particular award

Benefits are subject to the official competition structure and eligibility requirements.

7. Official Communication

APPLIES TO — GROUP A & GROUP B

All official competition information will be communicated through the official CYBORG Competition Website and official CYBORG communication channels.

These may include information related to:

- Competition dates
- Registration
- Challenge instructions
- Submission instructions
- Submission deadline
- Rule updates
- Important announcements
- Evaluation updates
- Results
- Certificates
- Rewards
- Other competition-related information

Participant Responsibility

Participants are responsible for regularly checking the official CYBORG Competition Website and official CYBORG communication channels for the latest competition information.

Participants should not rely on unofficial information, forwarded messages or third-party announcements as the final source of competition rules.

8. Competition Participant Flow

APPLIES TO — GROUP A & GROUP B

The complete participant journey is:

1. Discover the Competition

2. Visit Official CYBORG Competition Website

3. Check Eligibility

4. Select Age Group

5. Pay ₹499 Registration Fee

6. Complete Registration Form

7. Receive Competition Instructions

8. Understand Challenge

9. Plan Project

10. Develop Project

11. Test Project

12. Record 1–2 Minute Explanation/Demo Video

13. Prepare Source Code & Supporting Files

14. Complete Required Social Media Submission

15. Submit Project Online

16. Submission Verification

17. Online Evaluation

18. Score Calculation

19. Shortlisting / Final Evaluation

20. Winner Approval

21. Results Announcement

22. Certificates & Applicable Benefits

 **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) — <https://www.cyborgrobotics.in/codefest>**

9. Technology Requirements

APPLIES TO — GROUP A & GROUP B

The technology requirements are intentionally restricted to maintain a common technical foundation for participants.

Mandatory Technology

1. Python

Python must be used as the primary and core programming language of the project.

2. Tkinter

Tkinter must be used for the graphical user interface (GUI).

Participants should build the application's user interface using Tkinter.

3. SQLite

SQLite may be used as the database technology where database functionality is required.

10. Allowed Technology Stack

APPLIES TO — GROUP A & GROUP B

The competition technology stack is:

Technology	Requirement
Python	Mandatory
Tkinter	UI / GUI
SQLite	Database, where required

Participants may use Python's standard libraries and other supporting Python libraries only where such libraries are specifically permitted by the competition rules or official instructions.

11. Technologies Not Permitted

APPLIES TO — GROUP A & GROUP B

To maintain a common competition environment, participants must not use alternative application-development frameworks or UI technologies.

The following are not permitted:

- | | |
|--------------|------------------------------------|
| ✗ Flask | ✗ Angular |
| ✗ Django | ✗ Vue |
| ✗ FastAPI | ✗ PyQt |
| ✗ Streamlit | ✗ PySide |
| ✗ HTML | ✗ Kivy |
| ✗ CSS | ✗ Other GUI frameworks |
| ✗ JavaScript | ✗ Other web-development frameworks |
| ✗ React | |

The participant's project must follow the official technology stack:

Python + Tkinter + SQLite (where required)

12. Project Development Rules

APPLIES TO — GROUP A & GROUP B

Participants must develop the project according to the challenge assigned to their group.

The submitted project must:

- Use Python as the core programming language.
- Use Tkinter for the graphical user interface.
- Use SQLite where database functionality is required.
- Follow the assigned challenge.
- Contain the participant's own work.
- Be functional.
- Include the required source code.
- Include required supporting files.
- Be submitted before the official deadline.
- Be clearly demonstrated in the submitted video.

Participants are responsible for testing their project before submission.

 **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) — <https://www.cyborgrobotics.in/codefest>**

13. Group A — Rookie Coders

APPLIES TO — GROUP A ONLY (Age 11–15)

Age: 11–15 Years

PYTHON TO-DO CHALLENGE

Participants in Group A must create a Python-based To-Do List application using Tkinter.

The objective is to create an application that allows a user to manage tasks in a simple, useful and user-friendly manner.

The project should demonstrate:

- Basic Python programming
- Logical thinking
- User input handling
- Conditions
- Loops
- Functions
- Lists/dictionaries where appropriate
- Basic error handling
- GUI development using Tkinter
- Creativity

14. Group A — Core Requirements

APPLIES TO — GROUP A ONLY (Age 11–15)

The application must provide the following basic functionality.

14.1 Add Task

The user must be able to add a new task.

Example:

| *"Complete Python Homework"*

The task should be added to the application's task list.

14.2 Display Tasks

The application must clearly display the available tasks.

The user should be able to understand which tasks are currently present.

14.3 Mark Task as Complete

The user must be able to mark a task as completed.

The interface should make it reasonably clear which tasks are completed.

14.4 Delete Task

The user must be able to delete/remove a task.

14.5 Exit Application

The application should provide a clear method for closing/exiting the application.

14.6 Invalid Input Handling

The application should handle incorrect or unexpected input appropriately.

Examples:

- Empty task
- Invalid selection
- Attempting to perform an action without selecting a task
- Other basic input errors

15. Group A — Optional Features

APPLIES TO — GROUP A ONLY (Age 11–15)

Participants may add additional features to improve their application.

Possible examples include:

- Task priority
- Due date
- Task categories
- Search task
- Filter tasks
- Progress indicator
- Completed-task counter
- Pending-task counter
- Task statistics
- File storage
- SQLite database
- Custom Tkinter interface
- Reminder functionality
- Task sorting
- Additional useful functionality

Optional features should provide genuine value to the application.

Simply adding unnecessary features will not automatically result in a higher score.

16. Group A — Python Concepts

APPLIES TO — GROUP A ONLY (Age 11–15)

Participants may demonstrate concepts such as:

- Variables
- Data types
- Lists
- Dictionaries
- Conditions
- Loops
- Functions
- User input
- Output
- Error handling
- File handling
- SQLite database, if used
- Tkinter GUI

Participants are not required to use every concept.

The focus is on how effectively the participant applies Python to solve the given problem.

17. Group A — User Interface

APPLIES TO — GROUP A ONLY (Age 11–15)

The application interface must be developed using Tkinter.

The interface should be:

- Clear
- Simple
- Readable
- Organized

- Easy to navigate
- User-friendly

Participants should pay attention to:

- Button placement
- Labels
- Input fields
- Task display
- Navigation
- Readability
- Overall layout

 **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) — <https://www.cyborgrobotics.in/codefest>**

18. Group B — Seasoned Coders

APPLIES TO — GROUP B ONLY (Age 16–22)

Age: 16–22 Years

SMART TEAM MANAGEMENT APPLICATION CHALLENGE

Participants in Group B must develop a Python-based Smart Team Management Application using Tkinter.

The application should help a small team organize members, projects, tasks and progress.

The application should demonstrate practical software-development thinking.

19. Group B — Project Objective

APPLIES TO — GROUP B ONLY (Age 16–22)

The objective is to build an application that can help a small team manage its day-to-day activities.

The application may be designed for a team of approximately 10–25 members.

The participant should consider the following problem:

How can a team use one application to organize members, projects, tasks, deadlines and progress?

The final solution should be the participant's own implementation.

Participants may take general inspiration from modern productivity and collaboration applications, but they must not copy an existing application's project, design or source code.

20. Group B — Core Functional Areas

APPLIES TO — GROUP B ONLY (Age 16–22)

The application should include relevant functionality from the following areas.

A. Team Member Management

- Add team member
- View team members
- Update member information
- Remove team member
- Member role/designation
- Member details

B. Project Management

- Create project
- View projects
- Project description
- Project status
- Start date
- End date
- Progress tracking

C. Task Management

- Create task
- Assign task
- Task priority
- Task deadline
- Task status
- Pending tasks
- Completed tasks
- Overdue tasks
- Task filtering

D. Dashboard

The application should provide useful information through a dashboard.

Possible information:

- Total team members
- Total projects
- Total tasks
- Pending tasks
- Completed tasks
- Overdue tasks
- Project progress
- Team activity

E. Communication / Collaboration

Participants may implement simple internal collaboration functionality.

Examples:

- Team announcements
- Notes
- Comments
- Activity updates
- Internal messages

The feature should remain within the permitted Python + Tkinter technology stack.

21. Group B — Creative Feature

APPLIES TO — GROUP B ONLY (Age 16–22)

Participants should implement at least one meaningful creative feature.

Possible examples:

- Productivity score
- Smart task priority
- Attendance tracking
- Team performance dashboard
- Deadline reminder
- Gamification
- Leaderboard
- Achievement system
- Project progress tracker
- Productivity analytics
- Recommendation logic

The creative feature should solve a practical problem or improve the user experience.

22. Group B — Database

APPLIES TO — GROUP B ONLY (Age 16–22)

Participants may use SQLite for storing application data.

SQLite may be used for:

- User/member records
- Projects
- Tasks
- Task status
- Deadlines
- Activity records
- Other relevant application data

The database should be logically structured and appropriately connected to the Python application.

23. Group B — User Interface

APPLIES TO — GROUP B ONLY (Age 16–22)

The complete graphical user interface must be developed using Tkinter.

Participants should focus on:

- Clean layout
- Navigation
- Readability
- Consistent design
- Proper information organization
- Useful dashboard
- Clear buttons and controls
- Good user experience

The application should be practical and easy to understand.

 **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) — <https://www.cyborgrobotics.in/codefest>**

24. Source Code Requirements

APPLIES TO — GROUP A & GROUP B

Participants must submit the complete source code required for evaluation.

The submission may contain:

- .py files
- SQLite database file, if applicable
- Required images/assets
- Supporting files
- README/instruction file
- Dependency information, where applicable

The submitted source code should be organized properly.

Recommended Structure

```
Project_Name/  
|  
|—— main.py  
|—— modules/  
|   |—— tasks.py  
|   |—— users.py  
|   |—— projects.py  
|  
|—— database/  
|   |—— database.db  
|  
|—— assets/  
|  
|—— README.txt  
|—— requirements.txt
```

The structure is only a recommendation. Participants may organize their Python files according to their project design.

25. README / Project Instructions

APPLIES TO — GROUP A & GROUP B

Participants are encouraged to provide a README file containing:

- Project name
- Participant name

- Project description
- Main features
- Python version
- Required libraries
- How to run the application
- Database information, if applicable
- Login details, if applicable
- Other necessary instructions

The instructions should be clear enough for the evaluation team to understand how to run the submitted project.

26. Project Video Requirement

APPLIES TO — GROUP A & GROUP B

Every participant must submit a 1–2 minute explanation/demo video.

The video should include:

1. Introduction

Participant name and project name.

2. Problem

Explain what problem the project is trying to solve.

3. Solution

Explain how the application solves the problem.

4. Main Features

Briefly explain the important features.

5. Python / Logic

Briefly explain how Python is used.

6. Application Demonstration

Show the major functionality of the application.

7. Creative Feature

Explain the special or innovative feature added to the project.

The video should clearly represent the project that has been submitted.

27. Video Quality Requirements

APPLIES TO — GROUP A & GROUP B

The video should:

- Be between 1 and 2 minutes.
- Clearly show the application.
- Clearly explain the project.
- Have understandable audio.
- Demonstrate important features.
- Match the submitted project.
- Be accessible through the submitted link/file.

Participants should avoid unnecessary content that does not contribute to the project explanation.

28. Originality Policy

APPLIES TO — GROUP A & GROUP B

The project must represent the participant's own work.

Participants must not:

- ✗ Copy another participant's project.
- ✗ Submit another person's source code.
- ✗ Download an existing project and submit it as their own.
- ✗ Claim another person's work as their own.
- ✗ Copy a complete project from online sources.
- ✗ Misrepresent project ownership.

Participants should understand the source code they submit.

29. AI Policy

APPLIES TO — GROUP A & GROUP B

Participants must follow the official competition AI/originality policy.

AI-generated code or projects must not be submitted as the participant's own original work where prohibited by the competition rules.

Participants are responsible for the originality and ownership of their submitted work.

The competition management team may review submitted source code, project materials and other submitted evidence for originality and compliance.

Any violation of the official originality/AI policy may result in disqualification.

30. Social Media Submission

APPLIES TO — GROUP A & GROUP B

Where required, participants may be asked to publish their project or competition participation on:

- LinkedIn
- Instagram

The participant may include:

- Project screenshots
- Application interface
- Project video
- Project description
- Competition participation information
- CYBORG mention/tag
- Official competition hashtag

The participant must submit the relevant social-media URL through the official submission process where required.

31. Social Media Rules

APPLIES TO — GROUP A & GROUP B

Participants must ensure that:

- The submitted URL is correct.
- The post is publicly accessible where required.
- CYBORG is correctly mentioned/tagged where instructed.
- Competition information is accurate.
- Engagement is genuine.

Manipulated or artificial engagement may result in disqualification.

Social-media activity does not replace technical project evaluation.

32. Online Project Submission

APPLIES TO — GROUP A & GROUP B

Participants must submit their project through the official online submission process.

The submission may require:

Participant Information

- Name
- Age
- Contact information
- Registration details
- Selected group

Project Information

- Project name
- Project description
- Features
- Technology used
- Project instructions

Project Files

- Python source code
- SQLite database, if applicable
- Supporting files
- README/instructions

Video

- 1–2 minute explanation/demo video

Social Media

- Required LinkedIn/Instagram link, where applicable

33. Final Submission Checklist

APPLIES TO — GROUP A & GROUP B

Before clicking the final submission button, participants must check:

Registration

- ☐ Correct participant name
- ☐ Correct age
- ☐ Correct group
- ☐ Registration completed
- ☐ Payment completed

Project

- ☐ Project follows the assigned challenge
- ☐ Python is used
- ☐ Tkinter is used for GUI
- ☐ SQLite is used where required
- ☐ Main features work

- ☐ Project has been tested

Source Code

- ☐ Complete source code uploaded
- ☐ Supporting files uploaded
- ☐ Database included, if applicable
- ☐ README/instructions included
- ☐ Files are properly organized

Video

- ☐ Video is 1–2 minutes
- ☐ Project is explained
- ☐ Features are explained
- ☐ Application is demonstrated
- ☐ Video link works

Social Media

- ☐ Required post completed
- ☐ Correct CYBORG information included
- ☐ Required link submitted
- ☐ Link is accessible

Final Submission

- ☐ All required information is correct
- ☐ All files are uploaded
- ☐ All links are working
- ☐ Submission is completed before the official deadline

 **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) — <https://www.cyborgrobotics.in/codefest>**

34. Official Submission Deadline

APPLIES TO — GROUP A & GROUP B

The official submission deadline will be communicated through the official CYBORG Competition Website and official CYBORG communication channels.

Participants are responsible for regularly checking these official channels for the latest deadline and competition updates.

Participants are strongly advised to complete their submission before the final deadline rather than waiting until the last moment.

Late submissions may not be accepted.

35. Submission Verification

APPLIES TO — GROUP A & GROUP B

After submission, the competition management team may verify whether:

- The participant is eligible.
- Required information has been provided.
- Required files have been submitted.
- The project follows the technology requirements.
- The project follows the assigned challenge.
- The video has been submitted.
- Required social-media links have been provided.
- The submission follows competition rules.

Only eligible and compliant submissions will proceed through the applicable evaluation process.

36. Online Evaluation Process

APPLIES TO — GROUP A & GROUP B

The evaluation will be conducted online.

Evaluation Flow

↓
Winner Approval
↓
Result Announcement

37. Master Evaluation Rubric

APPLIES TO — GROUP A & GROUP B

The competition uses a total evaluation score of 100 points.

Evaluation Area	Weight
Product Explanation / Video	20%
Source Code	30%
UI/UX	30%
Functionality	20%
TOTAL	100%

38. Source Code — 30%

APPLIES TO — GROUP A & GROUP B

The source code evaluation may consider:

- Python implementation
- Logical structure
- Code organization
- Readability
- Use of functions
- Appropriate modularization
- Error handling
- Appropriate Python concepts
- Code completeness
- Quality of implementation
- Compliance with the required technology stack

39. UI/UX — 30%

APPLIES TO — GROUP A & GROUP B

The UI/UX evaluation may consider:

- Layout
- Navigation

- Readability
- Visual organization
- Consistency
- Information hierarchy
- Ease of use
- Interface clarity
- Creativity
- Overall user experience

The GUI must be created using Tkinter.

40. Functionality – 20%

APPLIES TO – GROUP A & GROUP B

The functionality evaluation may consider:

- Core functionality
- Feature completeness
- Application interaction
- Reliability
- Input handling
- Error handling
- Data management
- Practical usefulness
- Working condition of major features

41. Product Explanation / Video – 20%

APPLIES TO – GROUP A & GROUP B

The video evaluation may consider:

- Clarity
- Project understanding
- Problem explanation
- Feature explanation
- Demonstration
- Communication
- Understanding of Python logic
- Overall presentation

✂ Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) –
<https://www.cyborgrobotics.in/codefest>

42. Group A – Evaluation Focus

APPLIES TO – GROUP A ONLY (Age 11–15)

Group A participants will primarily be evaluated on their ability to create a functional To-Do application using Python and Tkinter.

The evaluation will consider:

- Python logic
- Core To-Do functionality
- UI/UX
- Error/input handling
- Creativity
- Code quality
- Project explanation

The master competition rubric remains:

Source Code – 30%

UI/UX – 30%

Functionality – 20%

Product Video – 20%

43. Group B – Evaluation Focus

APPLIES TO – GROUP B ONLY (Age 16–22)

Group B participants will primarily be evaluated on their ability to create a practical Smart Team Management Application using Python, Tkinter and, where required, SQLite.

The evaluation will consider:

- | | |
|----------------------------|--------------------------------------|
| • Python logic | • Database implementation where used |
| • Application architecture | • UI/UX |
| • Team management | • Functionality |
| • Project management | • Creative feature |
| • Task management | • Project explanation |
| • Dashboard | |

The master competition rubric remains:

Source Code – 30%

UI/UX – 30%

Functionality – 20%

Product Video – 20%

44. Disqualification

APPLIES TO — GROUP A & GROUP B

A participant may be disqualified for:

1. Submitting after the official deadline.
2. Plagiarism.
3. Submitting another person's project.
4. False ownership claims.
5. Providing false registration information.
6. Violating the technology requirements.
7. Using prohibited technologies.
8. Manipulating social-media engagement.
9. Submitting inappropriate content.
10. Serious violation of the originality/AI policy.
11. Manipulating or attempting to manipulate the evaluation process.
12. Submitting incomplete or invalid project material.
13. Any other serious violation of the official competition rules.

45. Technology Violation

APPLIES TO — GROUP A & GROUP B

A project may be rejected or disqualified if it does not follow the required technology stack.

Required:

Python + Tkinter + SQLite where required

Not permitted:

Web frameworks + HTML/CSS/JavaScript + PyQt/PySide + other GUI frameworks

Participants are responsible for ensuring that their project complies with the official technical requirements before submission.

46. Winner Selection

APPLIES TO — GROUP A & GROUP B

All eligible submissions will be evaluated according to the official evaluation rubric. The final score will be calculated using the approved evaluation criteria.

The competition management team will review the final evaluation results and confirm the winners.

The final competition results will be announced through the official CYBORG communication channels.

47. Awards & Recognition

APPLIES TO — GROUP A & GROUP B

Subject to the final approved competition structure, the competition may provide the following benefits.

Overall Winner

- Cash Prize
- Winner Certificate
- Paid Internship Opportunity
- Letter of Recommendation
- CYBORG Recognition

Top Performers

- Paid Internship Opportunity
- Certificate
- Letter of Recommendation

Finalists / Runner-Ups

- Certificate
- Free self-paced Power BI course access through CYBORG LMS, as applicable

The final prize amount and detailed benefit conditions will be communicated through the official competition channels.

✌ **Ready to compete? [Click here to Register](https://www.cyborgrobotics.in/codefest) —**
<https://www.cyborgrobotics.in/codefest>

48. Certificates

APPLIES TO — GROUP A & GROUP B

Eligible participants may receive digital certificates according to the final competition structure.

Possible certificate categories include:

- Winner
- Finalist
- Participant

The exact certificate categories and eligibility criteria will be communicated by CYBORG.

49. Participant Responsibility

APPLIES TO — GROUP A & GROUP B

Participants are responsible for:

- Understanding the challenge.
- Following the official rules.
- Using the permitted technology stack.
- Developing their own project.
- Testing their application.
- Preparing their source code.
- Recording the required video.
- Completing the submission form correctly.
- Checking the official CYBORG website and communication channels.
- Submitting before the deadline.
- Maintaining the originality of their work.

50. Important Communication Rule

APPLIES TO — GROUP A & GROUP B

Participants should regularly check:

Official CYBORG Competition Website

for:

- Rules
- Challenge information
- Dates
- Registration
- Submission instructions
- Announcements
- Results

Official CYBORG Communication Channels

for:

- Important updates
- Reminders
- Instructions
- Deadline notifications
- Competition announcements

Any officially published update may become part of the competition instructions.

51. Quick Participant Guide

APPLIES TO — GROUP A & GROUP B

Group A

Age: 11–15 | Challenge: Python To-Do Challenge

Technology:

Python + Tkinter

SQLite where required

Core Features:

- Add task
- Display task
- Complete task
- Delete task
- Exit
- Input/error handling

Optional:

- Priority
- Due date
- Search
- Filter
- Statistics
- Database
- Other useful features

Group B

Age: 16–22 | Challenge: Smart Team Management Application

Technology:

Python + Tkinter

SQLite where required

Core Areas:

- Team members
- Projects

- Tasks
- Deadlines
- Status
- Dashboard

- Progress
- Collaboration
- Creative feature

52. Final Participant Flow

APPLIES TO — GROUP A & GROUP B

STEP 1

Visit the official CYBORG Competition Website.

STEP 2

Read the competition rules and check eligibility.

STEP 3

Complete registration and pay ₹499.

STEP 4

Select the appropriate age group.

STEP 5

Read the challenge requirements.

STEP 6

Plan your application.

STEP 7

Develop using: Python + Tkinter + SQLite where required

STEP 8

Test all major functionality.

STEP 9

Prepare your source code and supporting files.

STEP 10

Record your 1–2 minute explanation/demo video.

STEP 11

Complete the required social-media activity, where applicable.

STEP 12

Upload all required material through the official online submission process.

STEP 13

Verify all files and links.

STEP 15

CYBORG conducts online evaluation.

STEP 16

Scores are calculated.

STEP 17

Final results are approved.

STEP 18

Winners and eligible participants receive applicable recognition and benefits.

53. Final Rule

APPLIES TO — GROUP A & GROUP B

The CYBORG Python Coding Challenge is designed to evaluate practical programming ability, logical thinking, creativity, application development and project presentation.

Participants should build a project that:

They understand.

They developed.

They can explain.

They can demonstrate through their submitted evidence.

The goal is not simply to submit a project, but to demonstrate the ability to:

THINK → CODE → CREATE → EXPLAIN
